

## FundSuiteArc Release Information

- **Version 1.1.0.5 - Release Date: January 28<sup>th</sup>, 2011**

- **ArcFiling Product**

1. Large N-MFP XML creation support.
  - a. In previous releases, FundSuiteArc had a limitation which prevented the production of large N-MFP XML filings, especially after submitting a "test" filing. The logic in the application around saving XML files has been modified and streamlined to support large amounts of data.
    - i. Note: This enhancement does not represent any changes to the user interface, nor require any additional setup, etc.*
2. Improved general stability of application services under high memory consumption.
  - a. Previously, certain functions which required large amounts of memory could create situations which prevented users from being able to log into the application. FundSuiteArc's communication mechanism has now been streamlined to reduce memory consumption, make output creation more efficient, and eliminate the user login issue.
    - i. Note: This enhancement does not represent any changes to the user interface, nor require any additional setup, etc.*
